

## Work certificate

Daniel Karlsson, 740613-2956, held a full time trainee post as a development engineer at Artema Medical AB (Artema) during the period 2005-01-24 – 2005-04-01. This period included, at Artema's request, a three-week extension of the initially agreed trainee period.

Artema is an independent OEM-supplier of advanced equipment for continuous monitoring of the gas composition of the patient breathing air during anaesthesia during for example medical surgery. We are in total 18 employees that develop, market and sell to leading medical equipment manufacturers all over the world. Sub-contractors carry out all production.

Daniel Karlsson worked in the R&D department and was responsible for a technical and commercial market survey of readily available breathing gas flow meters. He was also tasked with technical testing, data analysis and algorithm investigations for advanced matrix calculations of gas concentrations.

Daniel Karlsson showed a strong commitment to his different tasks, he was always positive to new assignments and eager to solve different problems on his own initiative. He has a solid understanding of physics and mathematics, which was essential in the successful completion of these tasks.

In addition Daniel is an interesting and easy-going person and was very popular among the staff at Artema.

Therefore we have no hesitation in highly recommending Daniel Karlsson and we are confident he will be a valuable asset at similar roles/companies in the future. Should you wish to discuss further please feel free to contact us.
